➤ Sample Questions: (For question 1 You will give scripts/paper and give them 45 Minutes then get the scripts back)

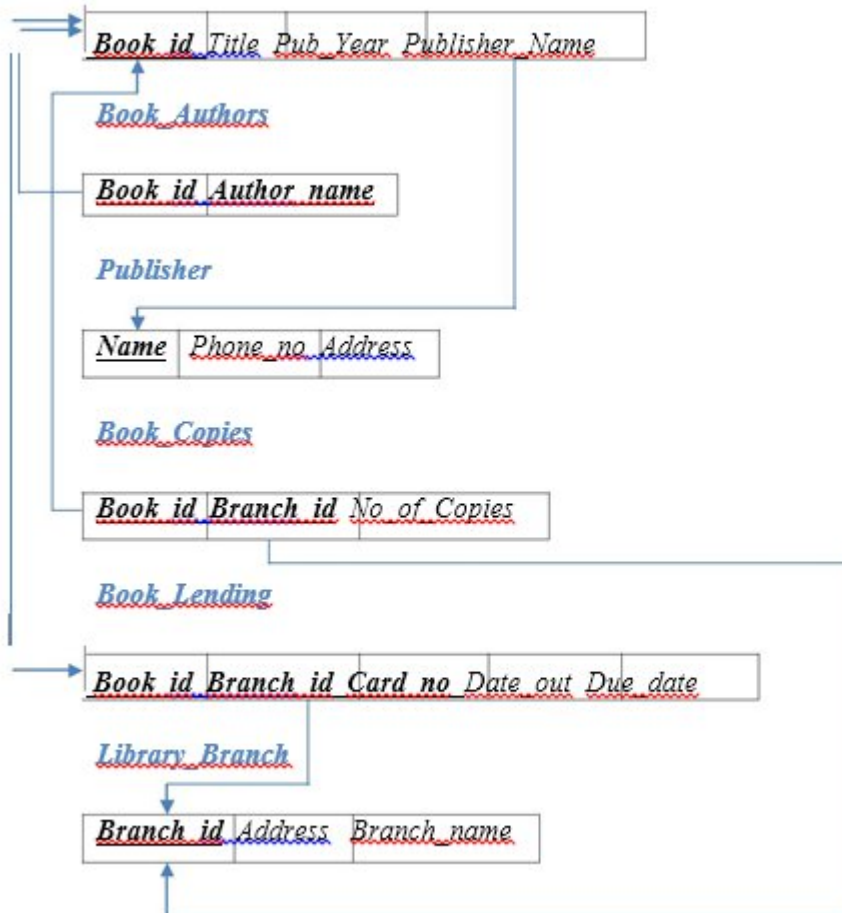

Q1. Consider the following ER diagram given to you what are the possible relations you will be creating in Relational model and write down code to define the table statements in SQL.

20

Q2. You will give the sql file to create the real tables and populate with data given in the script (book.sql) then you will ask the following queries. These queries will be based on this relational model.
